

USAID Efforts to Stop the Ebola Outbreak in the DRC

The ongoing Ebola outbreak in the Democratic Republic of the Congo (DRC) is the **second largest ever recorded**, behind only the West Africa outbreak of 2014–2016.

USAID has provided more than **\$136 million** for the response to the Ebola outbreak since it began in August 2018. USAID works with **20+ partners** providing critical aid, including support to **at least 360 health facilities** in DRC's Ebola-affected Ituri and North Kivu provinces.

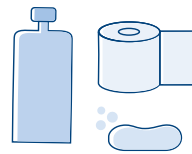

Disaster Assistance Response Team (DART)

USAID's DART is on the ground to coordinate the U.S. Government's response efforts and help prevent the spread of disease

Infection Prevention and Control (IPC)

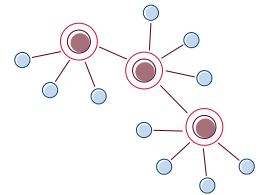

19,200

Health care staff trained on key IPC practices, including triage, screening, and waste management

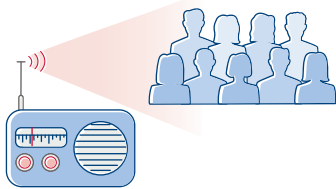

Installing and rehabilitating **65** hand washing stations, more than **180** water systems, and **75** latrines at health facilities

Disease Surveillance

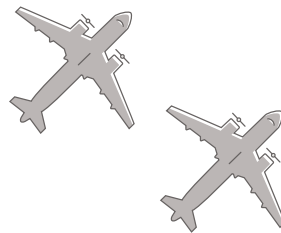

Supporting **1,680** community health care workers to conduct public health surveillance, including contact tracing

Social Mobilization, Community Engagement, and Communication

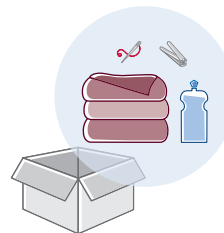

Disseminating health and Ebola awareness messages to more than **508,000** households, reaching more than **2.1 million** people, including more than **38,000** community leaders

Logistics

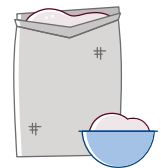

Transporting **1.2** metric tons (MT) of cargo and **100** passengers monthly and providing **53** MT of personal protective equipment to more than **100** health facilities

Protection

Establishing **6** safe spaces and supplying **1,800** dignity kits to vulnerable people

Food Assistance

Providing food assistance sufficient to meet the needs of **300,000** Ebola-affected people
